

If paper, pulp and other cellulosic compounds are overwhelming your systems; knock out the problem with...

Holding tank restricted by paper build-up.

PAPER PUNCH is specially formulated with a blend of naturally occurring microbes and enzymes. This provides cellulytic and enzymatic action for fast-acting and long-lasting results in:

- Holding Tanks
- Septic Tanks
- Sanitary and Storm Sewers
- Lift Stations
- Paper and Pulp Wastewater
- Cellulosic Agricultural Wastes

It's a fact that the wrong kinds of paper are all too often sent down to our sewer and septic systems; and there are manufacturing processes that naturally create a build-up of pulp. These create a build-up that:

- Limits Capacity
- Restricts Flow
- Causes Blockages

PAPER PUNCH can eliminate and provide continued control at:

- Hotels
- State Parks
- Trailer Parks
- Wastewater Collections
- Restaurants
- Shopping Malls
- Highway Rest Areas
- Train and Bus Stations
- Office Buildings
- Apartment Buildings
- Campgrounds and RV Parks
- Industrial and Manufacturing

Don't let paper and pulp restrict your flow. **PAPER PUNCH** can knock it out with a one-two punch.
