

# UNITED

## LABORATORIES

**United 979 PAPER PUNCH Pulp and Paper Control** can be used to control build-up of paper, pulp, and other plant-based materials and cellulosic compounds that can clog and overwhelm systems.

This specially formulated blend of naturally occurring microbes and enzymes provides fast-acting and long-lasting results in:

- Septic Tanks
- Holding Tanks
- Lift Stations
- Paper and Pulp Wastewater
- Sanitary and Storm Sewers
- Cellulosic Agricultural Wastes

#### DIRECTIONS FOR USE:

Product should be mixed at a rate of 1 pound per 1 gallon of warm water unless stated otherwise. Mix to form a slurry and let sit for 30 minutes before pouring mixture into water to be treated.

#### SEPTIC SYSTEMS:

Use 1 pound of product for each 400 gallons of capacity purge dose. If the drain field is clogged with grease, use United 556 ZYME-TREAT WWT feeding 6 gallons of product per each splitter box.

For continued maintenance, use 10% of the purge dose per month. No additional United 556 ZYME-TREAT WWT is needed unless field clogs with grease again.

#### HOLDING TANKS AND LIFT STATIONS:

**Initial Treatment:** Use 2.5 pounds of product per 100,000 gallons.

**Note:** This product is not designed to add on top of a grease cap in a lift station. It must be added directly to water.

#### SANITARY AND STORM SEWERS:

To break down cellulosic buildup in lines mix 0.25 pounds per 6 gallons of warm water. Let sit for 30 minutes before adding to the line.

For additional applications, please contact your United Sales Representative.
